

A space powered by community energy

When you join CampusAI, you quickly realise the course is only the beginning. Programmes and lessons matter, but the most valuable things happen in between. Our community is where we test what AI actually means in practice — because knowledge you don't use disappears quickly.

A place for everyone

Our community brings together people with very different backgrounds and levels of experience. At our meetups, someone presenting their first project may stand next to someone who feels completely at home on stage. This diversity is our strength — we learn from each other and grow together.

Products powered by community creativity

CampusAI and District.org evolve together with the community. Members contribute tutorials, articles for hAI Magazine, and tools like the PM Guide. In District.org, they even co-create the 3D world — designing quests, avatars and new ways of learning in VR.

Structure with room for initiative

Our activities combine structure with flexibility. Every month we meet for Graduation, where members present projects and receive expert feedback. We also run Masterminds — three months of focused work on business ideas — while leaving space for grassroots initiatives and community-led projects.

Why we do it?

AI tools change constantly, but relationships and real skills stay. CampusAI is a space where we explore together how AI can improve our work and lives — building this ecosystem with the community and for the community.

“ I believe the true value of a brand lies in its people. I build communities where audiences become co-creators — spaces for sharing knowledge, exchanging ideas and creating real projects together. I connect business goals with the voice of users, design educational initiatives and develop communities around Human + AI. Always happy to talk about communities, AI and the future of work.
